

# PEDESTRIAN SAFETY

Pedestrian fatalities in **work zones** saw a sharp increase

## Distracting Behaviors

[Talking on the phone, texting, headphones/in-ear devices] can cause pedestrians to lose sight of their surroundings.

It's safest to avoid **Construction Areas**

It's very important to obey **ALL WORK ZONE SIGNS.**

Always follow designated temporary pathways and never enter a workspace.

## 5 WORK ZONE TIPS FOR EVERY PEDESTRIAN

### Be alert and attentive

Construction vehicles often move suddenly and quickly. It's important to remain alert for moving equipment, debris and other hazards while in construction zones.

01

### Watch for approaching drivers

Look for oncoming traffic to ensure conditions are safe before crossing live traffic lanes, with particular focus on vehicular traffic at temporary crosswalks.

02

### Review project information

and understand project communications ahead of time. Frequently check the Revitalizing Broad Street website for project information and updates.

03

### Be especially aware at night

Never assume a motorist sees you at night, as your visibility is reduced. Wear visible clothing (lighter in color) when walking at night.

04

### Watch where you're going

Construction work may be fascinating to watch, but remember that your first responsibility is to get through the work zone as safely as possible.
